Growing Business Solutions LLC (GBS) Est 2004

GBS streamlines Internet technology creation and maintenance.

John Dale defined a master pattern for database interaction that enforces thrift, increases speed, and enables database communication automation while miniaturizing scalable information services.

The solution as a "miniaturized general motor for the Internet" (MGMFTI, All Rights Reserved).

GBS provides Symmetric/Asymmetric encryption of text/image and streaming audio/video as well as 3rd Normal Form database driven scalable Internet software.

We do NOT provide long-term 24x7 infrastructure and systems administration services beyond application deployment and limited startup periods.

We deliver Object Oriented software utilizing patterns for speed, portability, and the ability to extend it to meet changing business objectives/needs.

GBS' core strength is its ability to quickly manage change to its software and to empower others to do the same.

GBS builds applications for workforce multiplication with virtually push-button deployment of new features which should please systems/database/infrastructure engineers and administrators.

Some clients we have worked with in the past are The Wyoming Highway Patrol Association, The University of Arizona, Coast Capital Savings, Black Hills Cultivation and Supply, Western Center for Risk Management, and Kiewitt Corporation.
